

ALMA MATER STUDIORUM
UNIVERSITÀ DI BOLOGNA

AI for Health and Well-being @UNIBO

Prof. Marco Seri

Dipartimento di Scienze mediche e
Chirurgiche.

ALMA AI – AI for HEALTH & WELL-BEING

MISSION

To develop, apply, evaluate and disseminate Artificial Intelligence (AI) methods for health and well being

Our **interdisciplinary** AI research includes the development of transformative medical AI applications to improve

- the understanding of healthy and pathological processes
- advance patient health

ALMA AI – AI for HEALTH & WELL-BEING

FIELDS OF APPLICATION

Development and application of AI models for:

- predictive, personalized, preventive, and participatory (P4) medicine
- healthy aging
- biomarker discovery
- early diagnosis and prediction of patient-specific therapy and treatment
- Big data analytics, including multi-omic biomedical data (genomics, radiomics, etc.) and mitigation of their heterogeneity by harmonization and integrative methods

PROJECTS – UNIBO: a unique coordinated gateway to the Health domain

- UNIBO has been granted a total EU contribution of more than **17 M€** distributed in **30 H2020 projects (5 under IMI-2 JTI, 25 under SC1)**
- The University of Bologna is tightly interconnected and works synergically with **three main hospitals** at Regional and National level – now *Scientific Institutes for Research, Hospitalisation and Health Care*:
 - **Istituto Ortopedico Rizzoli (IOR)** is a dedicated institution for the study and care of musculoskeletal conditions
 - The **Istituto delle Scienze Neurologiche Bellaria (ISNB)** an excellence in neurological sciences research and care
 - **Policlinico St. Orsola – Malpighi**, the first city hospital with about 2,000 beds

PROJECTS in AI for HEALTH & WELL-BEING

H2020 PROJECTS 2014-20

- 25 projects
- 9.1 M€

ONGOING AND FUTURE PROJECTS

Planned the construction of a database regarding all the research activities in the field of AI for health and well-being

Workshop: December 17th

AI for HEALTH & WELL-BEING: DATA & METHODS

Data and AI methods @UNIBO

DATA @UNIBO: COVID-RELATED RESEARCH

In response to the global emergency caused by the **Covid-19 pandemic**, the University has promptly and actively taken part in national and international initiatives with research projects and innovative contributions involving the **multi-disciplinary resources and skills within our community**.

The main **projects and initiatives developed by UNIBO researchers** are available here: [Funded Projects](#).

An overall summary of our covid-related research activities have been collected in a **booklet** which include horizontal thematic areas and that will shortly available on the dedicated [UNIBO webpage](#) together with a “living” **database**, that currently includes over 90 contributions relating to UNIBO research, skills and resources.

DATA @UNIBO: COVID-RELATED RESEARCH

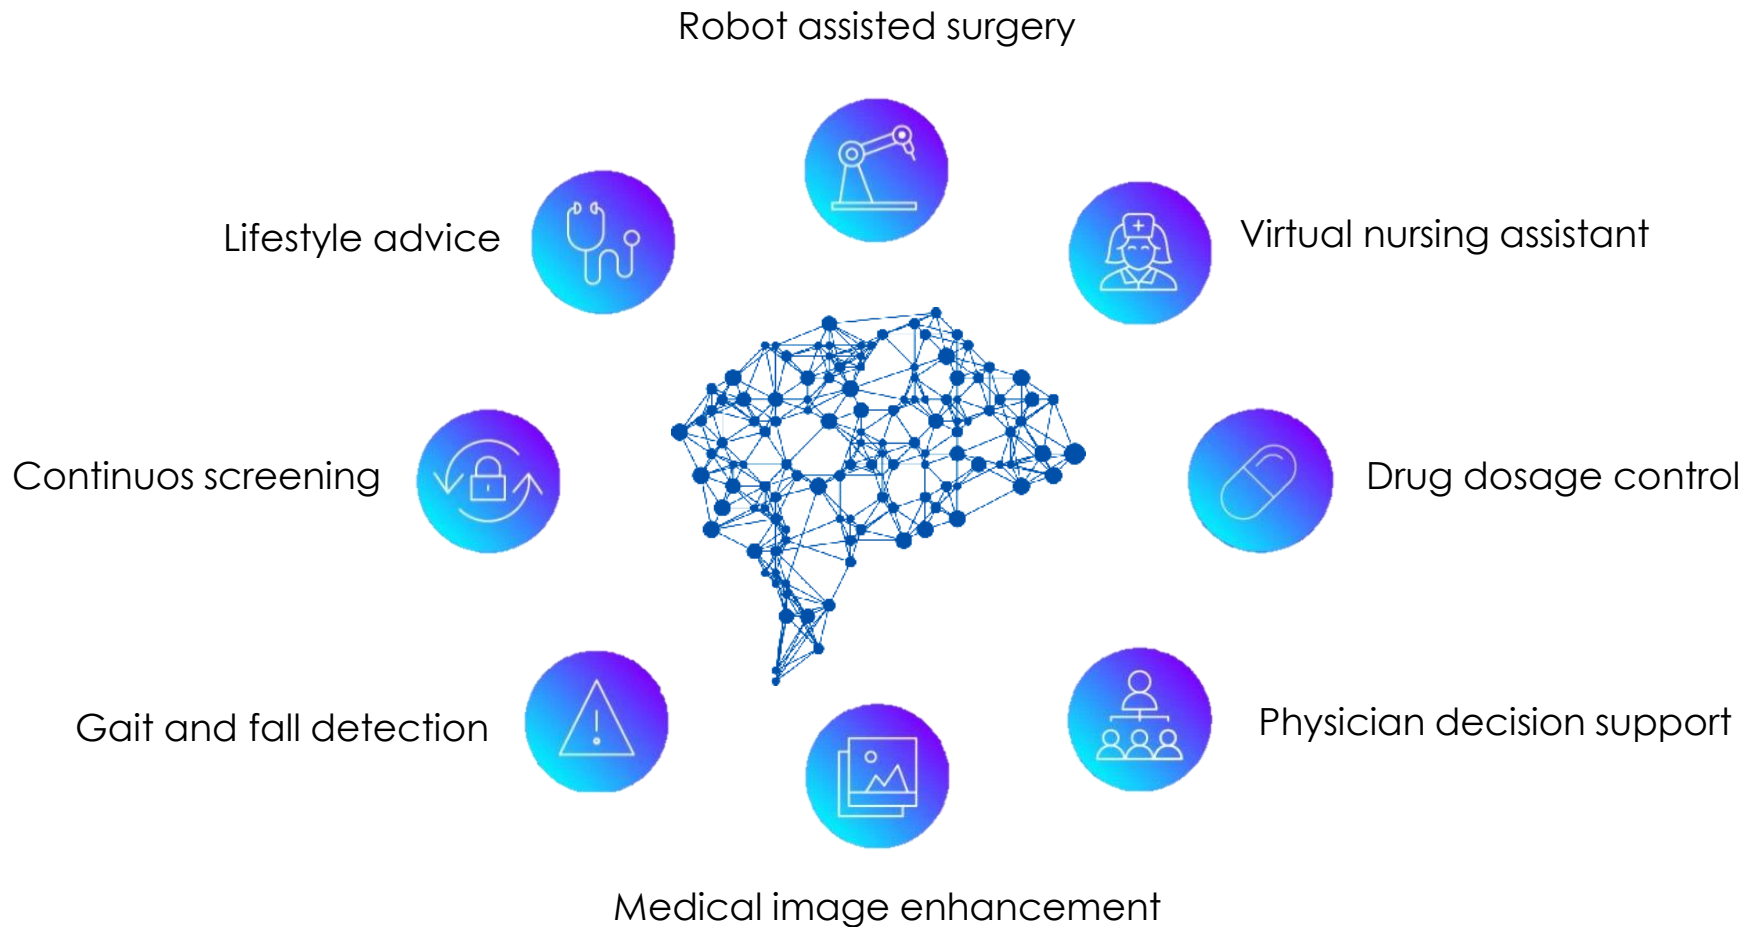

Moreover, within the last H2020 call **SC1-PHE-CORONAVIRUS-2020 – Advancing knowledge for the clinical and public health response to the 2019-nCoV epidemic**, UNIBO has been funded as Beneficiary of two research projects:

ORCHESTRA “Connecting European Cohorts to Increase Common and Effective Response to SARS-CoV-2 Pandemic”, and the Innovation Action

INNO4COV-19 “Boosting Innovation for Covid 19 Diagnostic, Prevention and Surveillance”

AI for HEALTH & WELL-BEING: TOPICS

Programma

Will doctors be AIs with a human touch?

Stefano Diciotti - *Machine Learning for Medical data*

Gastone Castellani - *Intelligence Genomics*

Giuseppe Notarstefano - *Collective intelligence: a framework to explore complex systems biology and federated AI medicine*

Nicola Baldini - *Intelligent orthopaedics: a joint effort exploring novel solutions for research and care*
