FROM IMAGING TO ANALYSIS Operetta CLS™ High-Content Analysis System

Veronique Berchet PhD,
HCS Field Application Scientist, PerkinElmer

stained with Alexa Fluor® 488 anti-TUJ1
Rudhard, Evotec AG.

ABSTRACT

Operetta CLS™ high-content analysis system combines speed and sensitivity for image acquisition with a powerful and intuitive data analysis software for everyday assays, and even complex challenges: live cells, 3D models, phenotyping profiling, rare events, and much more.

Featuring a unique combination of technologies, the system delivers all the speed, resolution and flexibility you need to acquire images and reveal fine sub-cellular details in 2D and 3D in an automated way.
